ABOUT US

Organic Space is a boutique consultancy specialising in the creation and management of sustainable green habitats within the urban environment.

Urban greening simultaneously restores our health and invites plants and animals to reclaim their place among us. We believe in creating spaces that will bring humans and nature together within the cityscape.

LANDSCAPE ARCHITECTURE & CONSTRUCTION MANAGEMENT

We offer an integrated, practical and site specific approach to landscape design.
We believe in creating spaces that are not only functional but also sustainable and beautiful.

We run projects from concept to execution, including project management and ongoing maintenance.
This ensures that our clients fully delight in the spaces that we have created for them.

VERTICAL GARDEN DESIGN

We specialise in designing and installing vertical gardens that suit any space. Vertical gardens add a whimsical feel to any space whether it be indoors or outdoors. The installation of vertical gardens serves as an innovative solution for bringing nature into small and limited urban spaces.

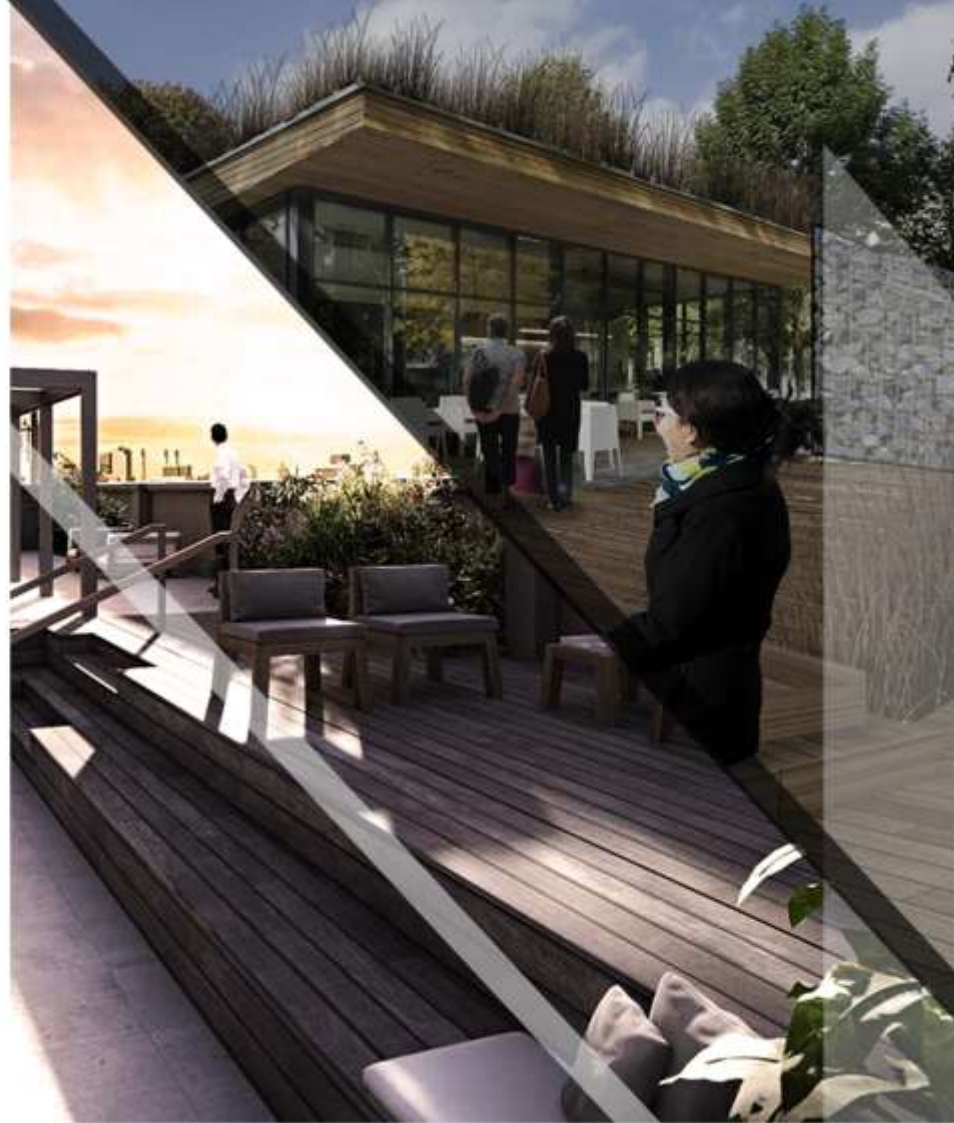

We believe in selecting the appropriate plant species as to insure the health and survival of the vertical garden.

ROOF TOP GARDEN DESIGN & INSTALLATION MANAGEMENT

The design and implementation of green roofs, forms part of our urban greening initiative. We believe that greener spaces are mutually beneficial for both humans and the natural environment.

Roof gardens often serve as an interesting gathering place and as a welcoming oasis within the concrete jungle.

GREENHOUSE DESIGN & CONSULTATION

Greenhouses provide the opportunity to grow plants in ideal circumstances within any setting and climate. At Organic Space we act as both consultants and designers of greenhouses. We combine innovations such as solar power, climate control and irrigation to create the ideal circumstances within the custom designed green houses.

As environmentally responsible designers we undertake to implement greenhouse systems and structures that are sustainable, resilient and energy efficient.

LAND REHABILITATION & WETLAND CONSERVATION

Our mission is to mitigate the negative effects of human activities on the natural environment. We repair the land by rehabilitating the soil and removing foreign invasive species. We are also passionate about conserving natural wetlands as to leave behind a heritage for the children and future of our country.
